**B**

  
**Initial Site Inspection**  
We begin by providing any of our services with a detailed inspection of the problem site to diagnose the underlying cause and determine the best and fastest solutions suitable for the client. We also prioritize providing services efficiently and with high quality, while adhering to industrial and environmental standards.

  
**Problem Treatment**  
After analysis, our team of experts develops a plan to treat the diagnosed problem. This is implemented in the first treatment visit, after which we assess the site's need for periodic treatments (monthly or annually, for example), scheduling them to suit the client.

  
**Follow-Up**  
Our next visit to you will be a follow-up visit, where the team will measure the responsiveness of previously applied solutions to ensure the quality and effectiveness of the work. We continue with follow-up visits until we ensure the problem is completely eradicated. And don't forget, you can contact the toll-free number.
